

Booster cushions

All our range of children's vehicle harnesses can be used in conjunction with booster cushions

Booster Seats

IMPORTANT: Our harnesses must **NOT** be used with child car seats fitted with an integral harness.

The **Model 28** harness can be used on some child seats with height-adjustable headrests which extend to grow with the child such as the **Britax Adventure**.

NB. This harness has not been designed to be used with child seats & may not be suitable for use with some designs of child seat.

However, some of our customers have found that they work very well together offering postural support or extra security for those with learning difficulties.

- The **model 28** harness is fitted **directly onto the vehicle seat first**, prior to fitting the booster seat.
- The child booster seat is then placed onto the vehicle seat & is fitted according to the manufacturers instructions.
- The shoulder straps and waist belt of the Crelling harness are then brought around the child car seat ready for the child to get into.
- The shoulder straps should slot between the shoulder of the car seat & the head rest.

Model 28 - will fit **single** and **double** seats as long as there is access between the seat cushion & back rest of the vehicle seat to pass the fixing straps vertically around the back rest.

Britax Adventure

15 to 36kg
approximately 4 to 11 years

IMPORTANT

Our harnesses are not classed as safety harnesses & must be used in conjunction with the vehicle safety belt. The combination of the existing vehicle safety belt & the secondary harness offers added security for the passenger
